

Inspire Industry To Make More With Less

Höganäs is the pioneer and world leader in metal powders. We know our products and services can improve resource efficiency and inspire our customers to do more with less. We work closely with our customers and their customers to thoroughly understand needs and requirements of the end product. We are developing tomorrow's solutions for numerous applications such as automotive components, brazing, electrical motors, surface coating, additive manufacturing and water treatment. With people at every level of our organization dedicated to redefining what is possible, we continue to astonish the world with new breakthroughs.

Our product range consist of iron-based powders and mixes, including stainless grades. Used for press and sinter, soft magnetics, and additive manufacturing, our tailored solutions increase part precision; optimize productivity and performance, while reducing total cost.

For all the limitless possibilities of additive manufacturing, we offer material of superior quality and full-service expertise. We have the widest range of products and production technologies. Our portfolio of 3D-printing metal powders covers the full range of additive manufacturing processes, including nickel, iron and cobalt based alloys.

With our acquisition of Surface Technology and Ceramic Powders (STC) from H.C. Starck, Höganäs has created the most complete product portfolio for surface coating applications on the market. Our products are used for applications in a wide range of industries, including aviation, power generation, agriculture, automotive, earth moving machines, repair and replacement as well as oil and gas.
